(54) TERMINAL PROVIDED WITH AUTOMATIC UPDATING FUNCTION

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a terminal having an automatic updating function, which can receive server information such as delivered and collection information stored in a server in real time without troublesome operations.

SOLUTION: A mobile detection means 76A-1 detects movement from a wireless area capable of wireless communication with one of the base stations 5A to 5Z to a wireless area capable of wireless communication with other base stations 5A to 5Z. An address information transmission means 76A-2 wirelessly transmits address information registered in an address information registration means 75-1 to the other base stations 5A to 5Z every time the mobile detection means 76A-1 detects movement. The base stations 5A to 5Z receive the address information and access a server 2 corresponding to the address information via the Internet 1. Further, the base stations 5A to 5Z wirelessly transmit server information stored in the server 2. A server information reception means 76A-3 receives the server information.
